PROJECT DESCRIPTION

Schoolister is a simple to-do list application catered for students who prefer a quick, straight to the point to-do list with easily understandable functions and few yet necessary activities thanks to a simple user interface. Tasks are also automatically listed in chronological order according to the deadline to easily monitor upcoming deadlines. This application also enables students to organize their school tasks by adding, updating, searching, and deleting data. Students may use this app to view the activities they have in certain subjects, as well as remove it as a means of monitoring ongoing and unfinished tasks.

Students are able to add new tasks easily just by pressing the “ADD TASK” button, which will redirect them to a new page with input sections. The tasks will then be added to the database and as mentioned before, automatically arranged in chronological order according to the deadline for hassle-free monitoring.

Students may also search tasks by searching either the course codes or the task name. This is done by pressing either the “SEARCH COURSE” or the “SEARCH TASK” button, depending on the purpose. This search system is effective in case a student’s professor in a specific course reminds them of doing their remaining activities for that course or a student has to search for a specific task name in case they want to change something to it or remove it from the list if they have accomplished it.

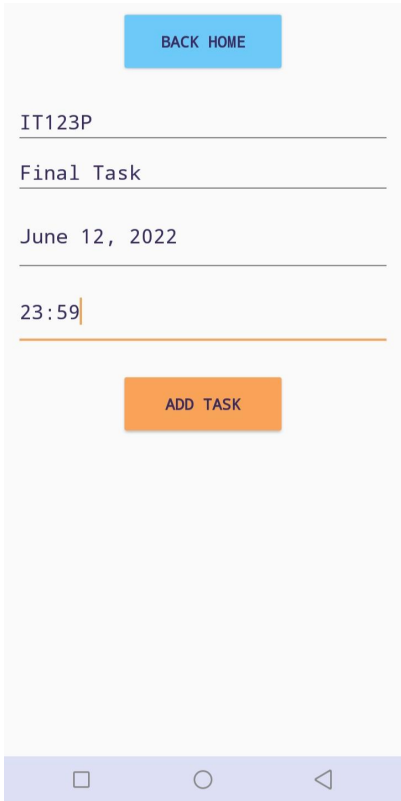

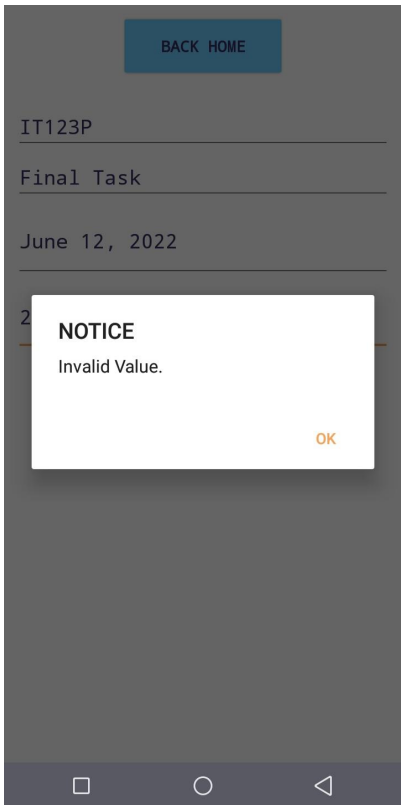

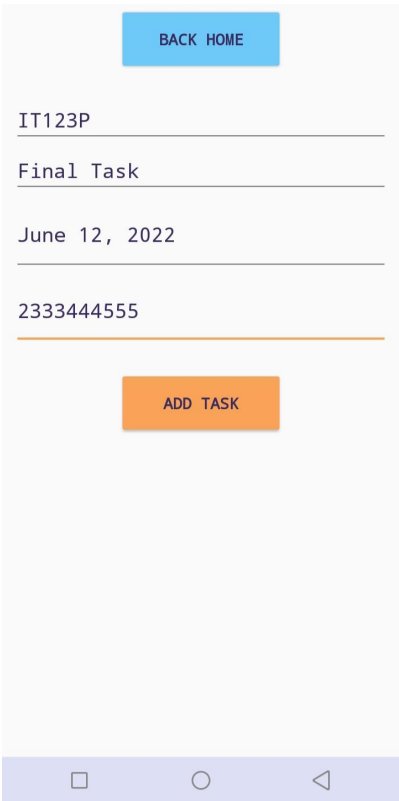

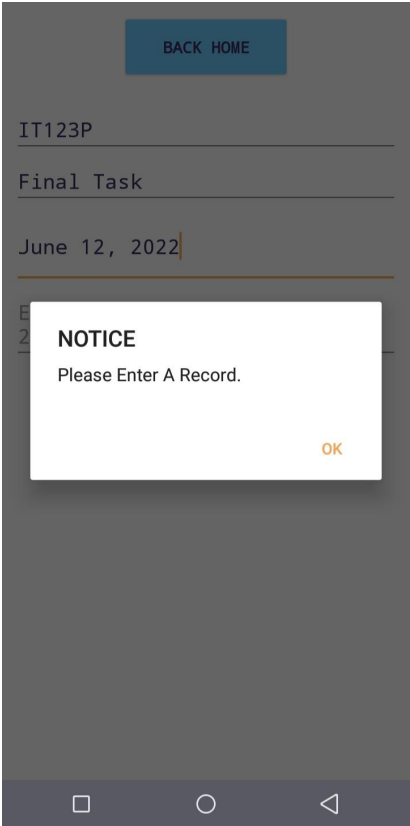

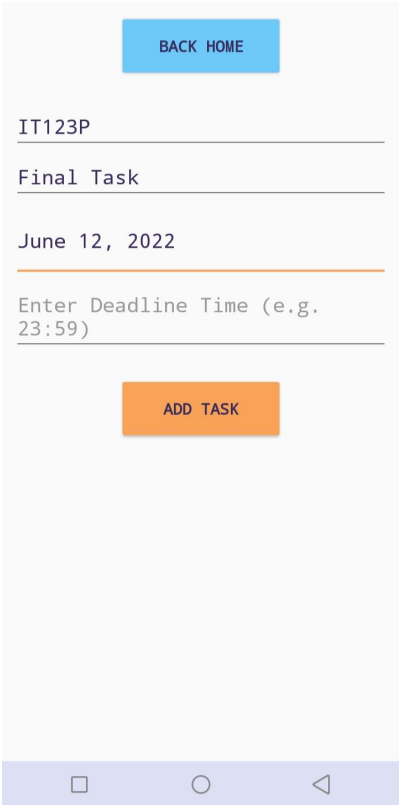

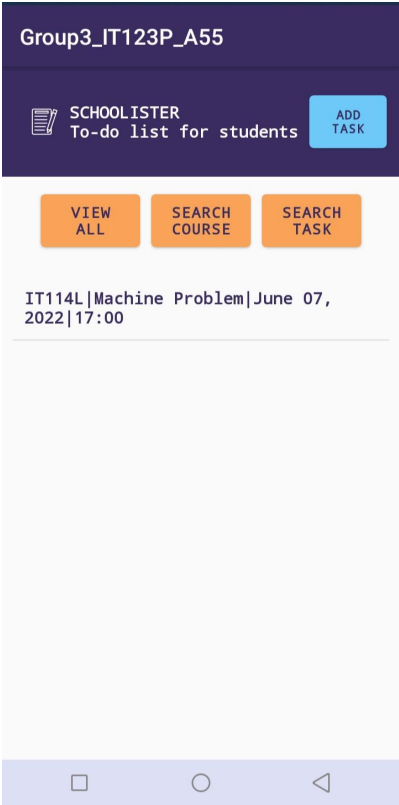

In connection with changing data, students may also update a certain part of the task such as the date or time in case there are times that the deadline has moved. Students may also update other parts such as the course code or task name in case they mistyped upon submission.

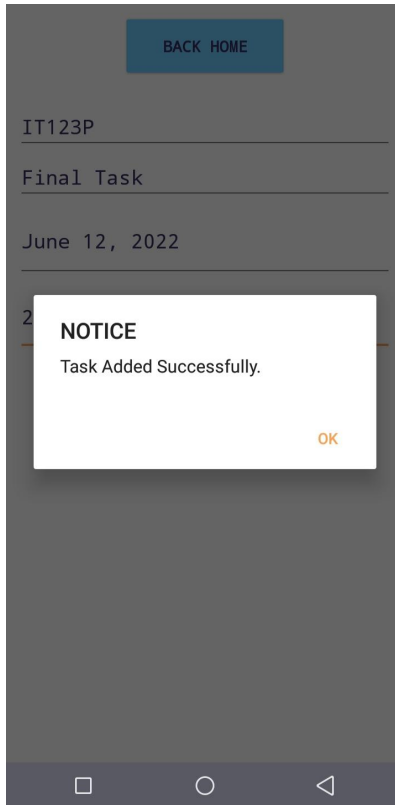

On the other hand, students are able to remove a task from the list if they have accomplished it or if the task was canceled by their professor. Removing a task completely from the list helps students clearly see their ongoing tasks on the list without any confusion.

In order to update or delete a specific task, students must simply press a specific task on the list which will redirect them to a new page where they have the option to update, delete, or go back home if they change their mind.
